

Python Program 1: Sum of All List Elements

Program

```
def sum_list(numbers):  
    total = 0  
    for num in numbers:  
        total += num  
    return total  
  
my_list = [10, 20, 30, 40, 50]  
print("Sum of all elements:", sum_list(my_list))
```

Output

Sum of all elements: 150
