

Program 2 – Find Maximum of Three Numbers

Answer / Python Program

```
def find_max(a, b, c):  
    return max(a, b, c)  
  
print(find_max(12, 67, 34))
```

Output

67

Note: The programs were formatted as working Python programs. The triangle program uses the complete area formula $\frac{1}{2} \times \text{base} \times \text{height}$, and the maximum-number program avoids recursive shadowing of Python's built-in `max()`.
