

Python Program 2: Second Largest Element

Program

```
def second_largest(lst):
    unique = list(set(lst)) # Remove duplicates
    unique.sort()
    if len(unique) < 2:
        return "No second largest element."
    return unique[-2]

my_list = [10, 20, 5, 40, 30, 40]
print("Second largest element:", second_largest(my_list))
```

Output

Second largest element: 30
