

Program 4 – Find Area of a Triangle

Answer / Python Program

```
def area_triangle(base, height):  
    return 0.5 * base * height  
  
b = float(input("Enter base: "))  
h = float(input("Enter height: "))  
print("Area:", area_triangle(b, h))
```

Output

```
Enter base: 10  
Enter height: 5  
Area: 25.0
```

Note: The programs were formatted as working Python programs. The triangle program uses the complete area formula $\frac{1}{2} \times \text{base} \times \text{height}$, and the maximum-number program avoids recursive shadowing of Python's built-in `max()`.
