

Python Program 5: Square Root Using Newton's Method

Program

```
num = 2.9
x = num

while True:
    root = 0.5 * (x + num / x)
    if abs(root - x) < 0.0001:
        break
    x = root

print("sq root is", root)
```

Output

```
sq root is 1.70293863659264
```
