

Program 6 – Check Whether a Number is Even or Odd

Answer / Python Program

```
def check_even_odd(num):  
    if num % 2 == 0:  
        return "Even"  
    else:  
        return "Odd"  
  
n = int(input("Enter a number: "))  
print("The number is", check_even_odd(n))
```

Output

```
Enter a number: 24  
The number is Even
```

Note: The programs were formatted as working Python programs. The triangle program uses the complete area formula $\frac{1}{2} \times \text{base} \times \text{height}$, and the maximum-number program avoids recursive shadowing of Python's built-in `max()`.
