

Program 9 – Sort a List

Answer / Python Program

```
def sort_list(numbers):  
    numbers.sort()  
    return numbers  
  
my_list = [45, 12, 78, 3, 19]  
print("Sorted List:", sort_list(my_list))
```

Output

```
Sorted List: [3, 12, 19, 45, 78]
```

Note: The programs were formatted as working Python programs. The triangle program uses the complete area formula $\frac{1}{2} \times \text{base} \times \text{height}$, and the maximum-number program avoids recursive shadowing of Python's built-in max().
