

Program 1 – Arithmetic Operations

Python Program

```
num1 = float(input("Enter first number: "))
num2 = float(input("Enter second number: "))

addition = num1 + num2
subtraction = num1 - num2
multiplication = num1 * num2

if num2 != 0:
    division = num1 / num2
else:
    division = "Division by zero is not possible"

print("Addition =", addition)
print("Subtraction =", subtraction)
print("Multiplication =", multiplication)
print("Division =", division)
```

Sample Input and Output

Input:

Enter first number: 20
Enter second number: 5

Output:

Addition = 25.0
Subtraction = 15.0
Multiplication = 100.0
Division = 4.0
